QUALITY POLICY

eDNAtec places client satisfaction at the forefront of our business philosophy. We have developed and implemented our quality, safety, business, and operational processes and are committed to maintaining a high standard of service to meet our client requirements, as well as statutory and regulatory requirements. We strive to create standardized, repeatable workflows that deliver high-quality biodiversity information with shorter turnaround time and greater breadth and depth than conventional methods. We are focussed on increasing client satisfaction by planning, controlling, and improving those activities which impact the client.

This Policy provides a framework for establishing quality objectives that allow continual improvement of our quality management system and promotion of our strategic direction. We commit to continually improving the effectiveness of our quality management system to help us meet our goals. The Board of Directors ensures the continued suitability of this policy and associated objectives by reviewing and monitoring their effectiveness on a regular basis and by providing the resources required to fulfill their intentions.
